TITLE : IMAGE INFORMATION STORAGE AND
TRANSMISSION SYSTEM

ABSTRACT : PROBLEM TO BE SOLVED: To provide an image information storage and transmission system (PACS) for quickly reporting the disturbance of the operation of a medical image diagnostic device and shortening the system down time of the PACS as much as possible.

SOLUTION: This system is provided with an MR (magnetic resonance imaging device) 1, a CT (X-ray CT device) 2 and a DR (digital X-ray device) 3, which are the medical image diagnostic devices, a device 4 for monitoring the diagnostic device, a network equipment 5, a communication equipment 6 for transmitting and receiving trouble information or the like to/from a remote maintenance system(RMS) and an external network equipment 7 connected to the RMS. The monitoring device 4 for the diagnostic device samples, analyzes and records the operating states of the medical image diagnostic devices 1-3 with prescribed time intervals and distributes the contents to the dedicated remote repairing device of the medical image diagnostic devices 1-3.
